

Introduction of our farm

Eigenji organic farm

Revive the barren fields,
With Mr./Ms. in the community
We want to protect a town where people can live safely and healthily.

Eigenji Mulberry was founded in 2004.
It started in the Eigenji district of Higashiomi City, Shiga Prefecture,
where depopulation is progressing
From the "Project to Revive Abandoned Farmland in Mulberry Fields"
Eigenji Organic Farm was born.

Aiming for SGDs through Agriculture and Welfare Collaboration

The members in charge of agricultural work at our garden range in age from 30 ~ 90 years old, and among them, the elderly and disabled people in the community are all Mr./Ms.. Organic cultivation involves Mr./Ms.'s manual work such as sowing, weeding, and harvesting, which is perfect for agricultural welfare cooperation. Sweat with friends in the great outdoors and share the joy of harvesting. We hope that every day of farming will extend healthy life expectancy and lead to a rich life.

Obtained organic JAS certification

With the desire to achieve world-class quality, we acquired organic JAS certification in 2016~17. We do not use pesticides or chemical fertilizers, make the most of the power of nature, and adhere to cultivation methods that do not place a burden on the environment. We deliver safe and secure products that meet strict standards.

Recycling-oriented agriculture

Mulberries trim their branches during the winter so that new branches sprout the following spring. Some of the branches are used for tea, and the rest are made into chips and laid at the base of the mulberry to prevent weeds. The chips decompose over 5 to 10 years to grow fluffy soil.

One of the largest organic medicinal plant farms in

The management area is about 10 hectares. It has become the largest cultivation of medicinal plants in the region. Starting with "mulberry", we have succeeded in a stable supply of "Asaba", which is said to be difficult to cultivate. In addition, we are also working on the cultivation of about 10 types of plants, such as "moringa", "mugwort".

Three Advantages + Organic

Mulberries trim their branches during the winter so that new branches sprout the following spring. Some of the branches are used for tea, and the rest are made into chips and laid at the base of the mulberry to prevent weeds. The chips decompose over 5 to 10 years to grow fluffy soil.
